## The perfect ageing for your products

The USV series models are refrigeration units designed for seasoning processes of cured meats and hams and for treating cheeses with the need of temperature and relative humidity control in medium-large rooms for industrial applications.

The operation range is from +25°C to +10°C while the achievable humidity range varies from 60% to 80%.

The USV series is offered with a capacity range of 7,2kW ÷ 87kW with a total room volume of 75m<sup>3</sup> ÷ 800m<sup>3</sup>.

All units can reproduce customized drying and ageing cycles, guaranteeing production in all seasons with any external climatic variation.

The USV system is composed by an efficient floor standing air handling unit, made of AISI 304 stainless steel and equipped with removable panels that allow easy access to the components completely contained within the body.

The USV refrigeration system is equipped with semi-hermetic compressor provided with integrated thermal protection and crankcase heater.

The refrigerant expansion is through thermostatic expansion valve.

The air-cooled condenser is remote, equipped with 4 or 6-pole fans and thermostatic speed variator with horizontal air flow to optimize condensing pressure.

The units are precharged with refrigerant and complete with liquid receiver, taps, safety valve, filter drier and sight glass.

A distinctive feature of the USV range is the humidification-dehumidification system, necessary for the implementation of the drying cycles.

Regulated by an electronic controller, the humidity control is performed thanks to the water taken from the water network to which the unit is connected and automatically introduced through spray nozzles.

The dehumidification phase precedes a heat recovery post-heating process.

The temperature inside the room is regulated by electric heating with an electronic control thermostat to secure precise and efficient operations.

Fresh air intake process in the room is managed by the electronic controller which allows highly effective centralized monitoring.

After positioning the unit inside or outside the room with suitable insulation, the installer needs to connect the remote condenser.

The correct operation of the machine can always be controlled through an electronic control board placed laterally and equipped with safety fuses.

The parameters and working times of the USV units can be adjusted directly by using the control unit with digital display for a fast, simple and highly customizable setting by the user.

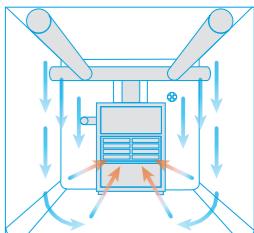

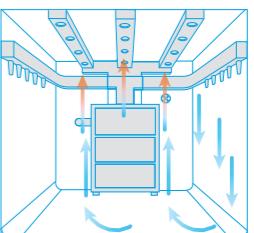

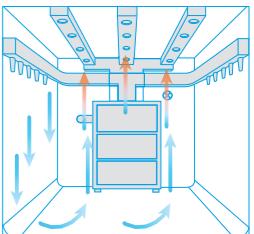

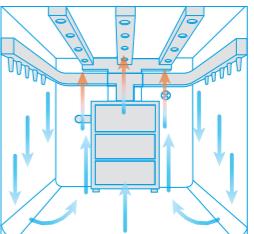

## Standard configuration

- › Frascold semihermetic compressor + Thermal overload protection
- › Power supply 380-400/3N~/50
- › Air + Axial fan (remote)
- › Embedded main electrical switchboard and remote control panel with Vision Touch controller + switch to select static/ventilated evaporator
- › Hot gas defrost
- › Magnetothermal switches
- › Liquid line predisposition for connection to static evaporators
- › Cataphoresis to the evaporator and heat recovery coil
- › Remote air cooled condenser
- › Soft start on centrifugal fan (starting from 15HP unit)
- › Liquid Receiver + Liquid receiver shut off valves
- › Safety valve
- › Filter drier
- › Sight glass
- › Four-pole condenser fan
- › Thermostatic valve expansion
- › Evaporator centrifugal fan
- › Air suction duct
- › Condensing unit with refrigerant charge
- › Switchboard with automatic switches
- › Adjustable calibration Hp switch with manual reset
- › Adjustable calibration Lp switch with automatic reset
- › Pressure controlled condenser fan speed regulator
- › Humidity control during dehumidification with heat recovery
- › Temperature control in hot with electric heaters
- › Humidity control in humidification with automatic water supply
- › Crankcase heater
- › Fresh air intake
- › Evaporator/heat recovery coil Copper/Aluminium with cataphoresis treatment
- › Heat recovery coil + heating with electrical heaters
- › Embedded main switchboard and remote control panel with Vision Touch Controller

## Air distribution systems with textile channels

The USV industrial drying units are equipped with large and efficient evaporators with centrifugal fan, capable of generating air flow from 1.500 to 14.600m<sup>3</sup>/h. This allows, thanks to the special galvanized sheet T-shaped ducts designed according to the room dimensions, an optimized distribution of the treated air in the room suitable for the required process. The T-shaped ducts are complete with motorized damper.

## Personalization options and accessories

### Power supply:

- › 440/3~/60
- › 380-400/3N~/60

### Condensation types:

- › Water cooled (city water with plate exchanger and pressure valve)

### Evaporator and defrost:

- › Hot gas defrost + evaporator/heat recovery coil Steel/Aluminium

### Dehumidification and heating:

- › Heat recovery coil + heating with hot water

### Soundproofing options:

- › Insulation for outdoor application

### Accessories kit:

- › Standard "T"
